AUTHOR INDEX OF VOLUME 11

Issue	*Page*		
1	37	P.A. Assimakopoulos	ANNA: an interactive program for analysis of one—dimensional pulse—height spectra.
1	141	A.R. Barnett	RCWFF — a modification of the real Coulomb wavefunction program RCWFN.
3	339	R. Bauer	Computation of the anisotropic cubic elastic Green's tensor function and the elastic energy coefficients of point defects in crystals.
3	313	D. Berger	A finite element approach to the computation of the MHD spectrum of straight noncircular plasma equilibria.
1	1	A.K. Bose	Computing dimensions of irreducible representations of simple Lie algebras.
2	159	A.K. Bose	An algorithm for generating the positive roots of simple Lie algebras.
3	385	G.B. Brundrit	Calculation of the form of an equilibrium poloidal magnetic field contained in a polytropic star.
1	27	T. Burnett	A program to calculate Green's functions.
1	75	D.C. Camp	A program for calculating gamma—gamma directional correlation coefficients and mixing ratios.
1	57	N.A. Cherepkov	Self—consistent field Hartree—Fock program for atoms.
1	57	L.V. Chernysheva	Self—consistent field Hartree—Fock program for atoms.
3	369	A.R. Davies	BOLTZ: a code to solve the transport equation for electron distributions and then calculate transport coefficients and vibrational excitation rates in gases with applied fields.
2	249	R.M. DeVries	Quasi—bound state wavefunctions.
1	49	K.K. Docken	Dipole and overlap integrals between Slater—type functions and continuum Coulomb functions.
1	95	R.A. Eisenstein	DWPI: a computer program to calculate the inelastic scattering of pions from nuclei.
2	287	F. Fernandez	Identification of nuclear reactions registered in ionographic detectors.
1	49	A.L. Ford	Dipole and overlap integrals between Slater—type functions and continuum Coulomb functions.
2	287	V. Gandia	Identification of nuclear reactions registered in ionographic detectors.
3	407	C. Gaussorgues	Erratum notice. Multistate molecular treatment of atomic collisions in the impact parameter approximation. I. Integration of coupled equations and calculation of transition amplitudes for the straight line case.
2	237	F.A. Gianturco	A new version of a program calculating the static interaction potential between an electron and a diatomic molecule.
1	125	R. Glass	Adaptation of CIV3 to evaluate hyperfine structure.
3	299	D.H. Gloeckner	The use of first and second derivatives in optical model parameter searches.

Issue	*Page*		
2	269	R.G. Gordon	Recursive evaluation of 3j— and 6j— coefficients.
3	397	I.P. Grant	A program to calculate angular momentum coefficients in relativistic atomic structure — revised version.
3	313	R. Gruber	A finite element approach to the computation of the MHD spectrum of straight noncircular plasma equilibria.
3	353	R.W. Hasse	One—dimensional wave packet solutions of time—dependent frictional or optical potential Schrodinger equations.
1	27	R.J.W. Henry	A program to calculate Green's functions.
1	125	A. Hibbert	Adaptation of CIV3 to evaluate hyperfine structure.
1	113	R.J.W. Hodgson	Matrix elements of the reaction matrix in finite nuclei.
2	287	C. Jacquot	Identification of nuclear reactions registered in ionographic detectors.
1	37	S. Kossionides	ANNA: an interactive program for analysis of one—dimensional pulse—height spectra.
1	75	R.G. Lanier	A program for calculating gamma—gamma directional correlation coefficients and mixing ratios.
3	339	R.K. Leutz	Computation of the anisotropic cubic elastic Green's tensor function and the elastic energy coefficients of point defects in crystals.
3	299	M.H. Macfarlane	The use of first and second derivatives in optical model parameter searches.
1	75	E.S. Macias	A program for calculating gamma—gamma directional correlation coefficients and mixing ratios.
3	385	M.J. Miketinac	Calculation of the form of an equilibrium poloidal magnetic field contained in a polytropic star.
1	95	G.A. Miller	DWPI: a computer program to calculate the inelastic scattering of pions from nuclei.
2	163	J. Moscinski	A study of the electrical conductivity processes in amorphous semiconductors using the computer simulation method. I. One—dimensional case.
2	169	J. Moscinski	A study of the electrical conductivity processes in amorphous semiconductors using the computer simulation method. II. Two—dimensional case.
2	177	J. Moscinski	A study of the electrical conductivity processes in amorphous semiconductors using the computer simulation method. III. Three—dimensional case.
2	143	J. Nadrchal	Role of structured programming in physical applications.
2	221	M.J. O'Connell	Computing a Laplacian field component from boundary observations only.
2	287	M. Ortega	Identification of nuclear reactions registered in ionographic detectors.
2	279	P. Petrasch	Nonlinear computation of anisotropic elastic fields about straight edge dislocations.
1	5	L.G.K. Petravic	TRANAL: a program for the translation of Symbolic Algol I into Symbolic Algol II.
1	5	M. Petravic	TRANAL: a program for the translation of Symbolic Algol I into Symbolic Algol II.
3	407	R.D. Piacentini	Erratum notice. Multistate molecular treatment of atomic collisions in the impact parameter approximation. I. Integration of coupled equations and calculation of transition amplitudes for the straight line case.

Issue	*Page*		
3	299	S.C. Pieper	The use of first and second derivatives in optical model parameter searches.
1	57	V. Radojevic	Self—consistent field Hartree—Fock program for atoms.
2	183	C.H. Rasmussen	Error analysis of code AROSA for quantal Coulomb excitation calculations.
2	183	G.H. Rawitscher	Error analysis of code AROSA for quantal Coulomb excitation calculations.
1	5	K.V. Roberts	TRANAL: a program for the translation of Symbolic Algol I into Symbolic Algol II.
1	27	S.P. Rountree	A program to calculate Green's functions.
1	75	W.D. Ruhter	A program for calculating gamma—gamma directional correlation coefficients and mixing ratios.
2	163	Z. Rycerz	A study of the electrical conductivity processes in amorphous semiconductors using the computer simulation method. I. One—dimensional case.
2	169	Z. Rycerz	A study of the electrical conductivity processes in amorphous semiconductors using the computer simulation method. II. Two—dimensional case.
2	177	Z. Rycerz	A study of the electrical conductivity processes in amorphous semiconductors using the computer simulation method. III. Three—dimensional case.
2	199	M. Salem	Converter of FORTRAN format and data statements to standard form.
3	407	A. Salin	Erratum notice. Multistate molecular treatment of atomic collisions in the impact parameter approximation. I. Integration of coupled equations and calculation of transition amplitudes for the straight line case.
2	269	K. Schulten	Recursive evaluation of 3j— and 6j— coefficients.
3	363	M. Schumacher	Non—relativistic form factor program for Compton scattering of gamma rays by bound electrons.
3	363	F. Smend	Non—relativistic form factor program for Compton scattering of gamma rays by bound electrons.
3	369	K. Smith	BOLTZ: a code to solve the transport equation for electron distributions and then calculate transport coefficients and vibrational excitation rates in gases with applied fields.
3	325	Y. Starkand	Subroutine for calculation of matrix Pade approximants.
2	257	A.S. Stefanescu	Program for optimal computation of EPR spin—Hamiltonian parameters for ions in tetragonal symmetry.
3	369	R.M. Thomson	BOLTZ: a code to solve the transport equation for electron distributions and then calculate transport coefficients and vibrational excitation rates in gases with applied fields.
2	287	M. Tomas	Identification of nuclear reactions registered in ionographic detectors.
3	313	F. Troyon	A finite element approach to the computation of the MHD spectrum of straight noncircular plasma equilibria.
2	287	A. Vidal—Quadras	Identification of nuclear reactions registered in ionographic detectors.
2	211	E.D. von Meerwall	A flexible, all—purpose curve—fitting program.
3	331	E.D. von Meerwall	A simple FORTRAN program to interpret cubic X—ray powder diffraction data.
1	27	C.A. Weatherford	A program to calculate Green's functions.

PROGRAM INDEX OF VOLUME 11

Astrophysics

Issue	*Page*	*Cat.no.*	
3	385	AAAI	POLOID (Fortran). Calculation of the form of an equilibrium poloidal magnetic field contained in a polytropic star. G.B. Brundrit, M.J. Miketinac. See other version of this program AAAE 7(1974)410.

Atomic Physics

1	57	AAKQ	ATOMIC SCF HARTREE—FOCK (Algol). Self—consistent field Hartree—Fock program for atoms. L.V. Chernysheva, N.A. Cherepkov, V. Radojevic.
1	125	AAKF	0001 ADAPT TENSOR FOR PRODUCTS (Fortran). Adaptation of CIV3 to evaluate hyperfine structure. R. Glass, A. Hibbert. Subroutines required by this program are ACQB 1(1969)15, ACRN 6(1973)88, AAGD 1(1970)241, AAGD0001 2(1971)180.
1	125	AAKM	0001 ADAPT CIV3 FOR HFS (Fortran). Adaptation of CIV3 to evaluate hyperfine structure. R. Glass, A. Hibbert. Subroutines required by this program are ACQB 1(1969)15, ACRN 6(1973)88, AAGD 1(1970)241, AAGD0001 2(1971)180, AAGD0002 5(1973)161, ACQV 2(1971)180, ACQV0001 7(1974)318, ACQV0002 8(1974)329, AAKF 6(1973)132, AAKF0001 11(1976)125.
1	141	ABPC	0001RCWFF (Fortran). RCWFF — a modification of the real Coulomb wavefunction program RCWFN. A.R. Barnett.
3	353	ACWT	FRICTION (Fortran). One—dimensional wave packet solutions of time—dependent frictional or optical potential Schrodinger equations. R.W. Hasse.
3	363	ACWW	COMPTON CROSS SECTIONS (Fortran). Non—relativistic form factor program for Compton scattering of gamma rays by bound electrons. F. Smend, M. Schumacher.
3	397	ACRJ	000A CORRECTION 10/06/76 (Fortran). Appendix to a program to calculate angular momentum coefficients in relativistic atomic structure — revised version. I.P. Grant.
3	397	ACWE	MCP75 (Fortran). A program to calculate angular momentum coefficients in relativistic atomic structure — revised version. I.P. Grant. Subroutines required by this program are AAGD 1(1970)241, AAGD0002 5(1973)161, ACRI 4(1972)377. See other version of this program ACRJ 5(1973)263.
3	407	ACWJ	000A CORRECTION 21/06/76 (Fortran). Multistate molecular treatment of atomic collisions in the impact parameter approximation. I. Integration of coupled equations and calculation of transition amplitudes for the straight line case. C. Gaussorgues, R.D. Piacentini, A. Salin.

Crystallography

3	331	ABMT	XRAY2 (Fortran). A simple FORTRAN program to interpret cubic X—ray powder diffraction data. E.D. von Meerwall.

Electrostatics

2	221	ABCM	MAGNETSUITE (Fortran). Computing a Laplacian field component from boundary observations only. M.J. O'Connell.

General Purpose

Issue	*Page*	*Cat.no.*	
1	5	ABUN	TRANAL (Algol). TRANAL: a program for the translation of Symbolic Algol I into Symbolic Algol II. L.G.K. Petravic, M. Petravic, K.V. Roberts.
1	27	ACWN	GRN1 (Fortran). A program to calculate Green's functions. S.P. Rountree, T. Burnett, R.J.W. Henry, C.A. Weatherford.
1	141	ABPC	0001RCWFF (Fortran). RCWFF — a modification of the real Coulomb wavefunction program RCWFN. A.R. Barnett.
2	199	ACWP	FORMAT AND DATA CONVERTER (Fortran). Converter of FORTRAN format and data statements to standard form. M. Salem.
2	211	ABMR	UNIFIT2 (Fortran). A flexible, all—purpose curve—fitting program. E.D. von Meerwall.
2	269	ACWQ	J1—RECURSION OF 3J—COEFFICIENTS (Fortran). Recursive evaluation of 3j— and 6j— coefficients. K. Schulten, R.G. Gordon.
2	269	ACWR	M2—RECURSION OF 3J—COEFFICIENTS (Fortran). Recursive evaluation of 3j— and 6j— coefficients. K. Schulten, R.G. Gordon.
2	269	ACWS	J1—RECURSION OF 6J—COEFFICIENTS (Fortran). Recursive evaluation of 3j— and 6j— coefficients. K. Schulten, R.G. Gordon.
3	325	ACWV	PADE APPROXIMANTS (Fortran). Subroutine for calculation of matrix Pade approximants. Y. Starkand.

Laser Physics

3	369	ACWX	BOLTZ (Fortran). BOLTZ: a code to solve the transport equation for electron distributions and then calculate transport coefficients and vibrational excitation rates in gases with applied fields. R.M. Thomson, K. Smith, A.R. Davies.

Molecular Physics

1	49	ABWB	ONEINT (Fortran). Dipole and overlap integrals between Slater—type functions and continuum Coulomb functions. K.K. Docken, A.L. Ford.
2	237	ACWO	OCEP W.F. AND STATIC POTENTIAL (Fortran). A new version of a program calculating the static interaction potential between an electron and a diatomic molecule. F.A. Gianturco. See other version of this program ACQW 2(1971)261.
3	407	ACWJ	000A CORRECTION 21/06/76 (Fortran). Multistate molecular treatment of atomic collisions in the impact parameter approximation. I. Integration of coupled equations and calculation of transition amplitudes for the straight line case. C. Gaussorgues, R.D. Piacentini, A. Salin.

Nuclear Physics

1	37	ABMN	ANNA (Fortran). ANNA: an interactive program for analysis of one—dimensional pulse—height spectra. P.A. Assimakopoulos, S. Kossionides.
1	75	ABPG	ANGCOR (Fortran). A program for calculating gamma—gamma directional correlation coefficients and mixing ratios. E.S. Macias, W.D. Ruhter, D.C. Camp, R.G. Lanier.
1	95	ABIG	DWPI (Fortran). DWPI: a computer program to calculate the inelastic scattering of pions from nuclei. R.A. Eisenstein, G.A. Miller. Subroutine required by this program is ABCJ 8(1974)130.
1	113	ABIE	REFERENCE REACTION MATRIX (Fortran). Matrix elements of the reaction matrix in finite nuclei. R.J.W. Hodgson. Subroutine required by this program is ABIF 11(1976)113.

Nuclear Physics (cont.)

Issue	*Page*	*Cat.no.*	
1	113	ABIF	REACTION MATRIX (Fortran). Matrix elements of the reaction matrix in finite nuclei. R.J.W. Hodgson. Subroutine required by this program is ABIE 11(1976)113.
1	141	ABPC	0001RCWFF (Fortran). RCWFF — a modification of the real Coulomb wavefunction program RCWFN. A.R. Barnett.
2	221	ABCM	MAGNETSUITE (Fortran). Computing a Laplacian field component from boundary observations only. M.J. O'Connell.
2	249	ABMQ	QUASI—BOUND STATE WAVEFUNCTIONS (Fortran). Quasi—bound state wavefunctions. R.M. DeVries.
2	287	ABKF	JOTOV (Fortran). Identification of nuclear reactions registered in ionographic detectors. M. Ortega, A. Vidal—Quadras, M. Tomas, F. Fernandez, V. Gandia, C. Jacquot.
3	353	ACWT	FRICTION (Fortran). One—dimensional wave packet solutions of time—dependent frictional or optical potential Schrodinger equations. R.W. Hasse.

Plasma Physics

3	369	ACWX	BOLTZ (Fortran). BOLTZ: a code to solve the transport equation for electron distributions and then calculate transport coefficients and vibrational excitation rates in gases with applied fields. R.M. Thomson, K. Smith, A.R. Davies.

Quantum Chemistry

1	49	ABWB	ONEINT (Fortran). Dipole and overlap integrals between Slater—type functions and continuum Coulomb functions. K.K. Docken, A.L. Ford.
2	237	ACWO	OCEP W.F. AND STATIC POTENTIAL (Fortran). A new version of a program calculating the static interaction potential between an electron and a diatomic molecule. F.A. Gianturco. See other version of this program ACQW 2(1971)261.

Solid State Physics

2	257	ACKI	EPR SPIN HAMILTONIAN PARAMETERS (Fortran). Program for optimal computation of EPR spin—Hamiltonian parameters for ions in tetragonal symmetry. A.S. Stefanescu.
2	279	ACKK	NONLIN (Fortran). Nonlinear computation of anisotropic elastic fields about straight edge dislocations. P. Petrasch.
3	339	ACKL	ANISCO (Algol). Computation of the anisotropic cubic elastic Green's tensor function and the elastic energy coefficients of point defects in crystals. R.K. Leutz, R. Bauer.
